Sapphire[®]

The Future of Liquid Fuel Heating

Sapphire Fully Modulating Liquid Fuel Boiler, Operates via OpenTherm Protocol for smart connectivity, Intelligent flame detection functionality.
ErP and BED tested and approved.
Exceeds The 2018 ErP Directive for NOx Emissions.

WHY CHOOSE A SAPPHIRE BOILER?

Sapphire's fully modulating operation delivers the best in energy efficiency and carbon emission reduction of any domestic liquid fuel boiler on the market today.

- 25-year Warranty on Heat Exchanger!
- All Stainless-Steel Construction
- OpenTherm Smart Plug and Play Technology
- Fuel Savings Between 15 - 25%
- Full Aftercare Service

"We have noticed a decrease in our fuel consumption, with it reducing by one tank fill per year, saving 1000 litres last year"

Robin & Laura Smith

The Sapphire blue flame boiler provides heating engineers with a solution to fit efficient oil boilers with significantly lower NOx emissions and reduced heating bills for their customers.

Sapphire fully stainless-steel boilers are available in Kerosene and HVO bioliquid ready variants.

REDUCE YOUR CARBON FOOTPRINT

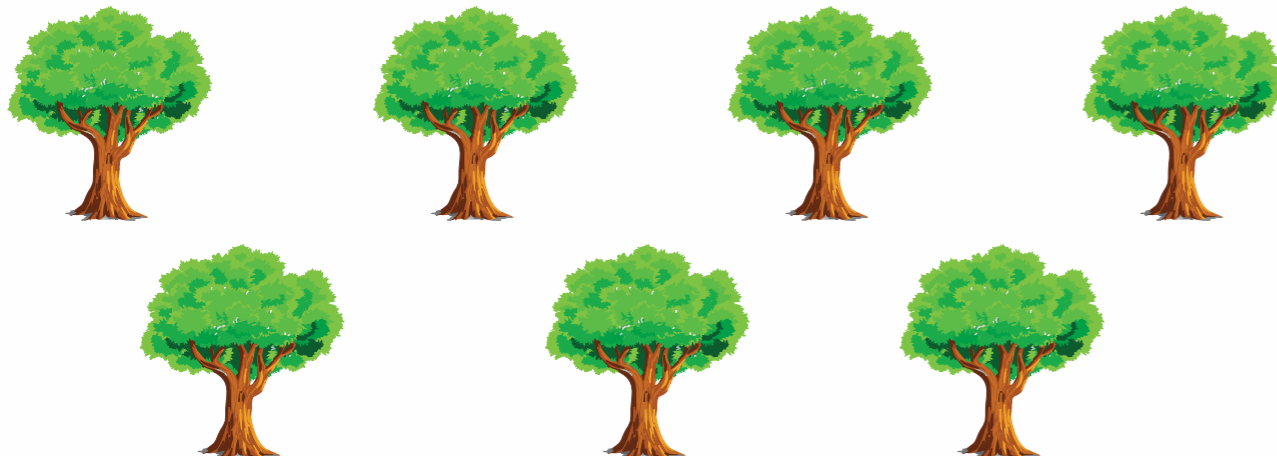

By purchasing a Sapphire Boiler you have already made a huge step towards reducing your carbon footprint.

We have worked with [Carbon Footprint Ltd](#) to develop a scheme where you can offset your emissions by tree planting for every Sapphire purchased.

Do you know how many Broadleaf Trees would be required to offset a 2 bedroom property?

A Kerosene Standard Efficiency Boiler requires **93 Trees**

A Sapphire running on HVO requires just **7 Trees!**

SAPPHIRE IS THE ONLY LIQUID FUEL BOILER THAT CAN DEMONSTRATE A RETURN ON YOUR INVESTMENT

With Sapphire you are investing in the future. We can give you the peace of mind knowing your boiler is futureproofed with its ability to easily transition to renewable liquid fuel HVO.

WHAT IS MY RETURN ON INVESTMENT?

Compared to installing an alternative boiler, it's possible you will see a complete payback on your Sapphire Boiler within four years. By this time your boiler will still have 21 years warranty left on the heat exchanger!

WHAT IS HVO?

THE FUEL OF THE FUTURE AVAILABLE TODAY

Hydrotreated Vegetable Oil (HVO) is a certified low carbon fuel produced from waste cooking oils and fats.

HVO offers up to a 90% reduction in CO2e emissions compared to Kerosene.

Homes currently on Kerosene can easily transition to this fuel with minor conversions.

By transitioning to HVO we are all playing our part in decarbonisation.
